The Cluster for the Mobility of the Future
Membership is open to interested and committed players from industry and research, who have a location in Baden-Württemberg. In addition, it is possible to participate in cooperations with Cluster Electric Mobility South-West as a partner.

We look forward to getting in touch with you.

For more information and questions you might have concerning Cluster Electric Mobility South-West, please contact the cluster management team of State Agency for New Mobility Solutions and Automotive Baden-Württemberg e-mobil BW GmbH.

Cluster Electric Mobility South-West offers its members the opportunity to exchange information and to network with one another within the framework of the annual complete team meetings.

In addition to working on technological projects in the innovation fields of energy, production, vehicles, and ICT, the cluster members also cooperate closely in cross-sectional fields, such as internationalisation, knowledge transfer, training, and further education, and they present themselves to the public in a joint front.

In the „Intelligent Move“, „Commercial Vehicles“ and „Internationalisation“ working groups, important topics for the industrialisation of electromobility are promoted. This is done with the purpose of positioning Baden-Württemberg as a global market leader in innovative mobility solutions.

Cluster Electric Mobility South-West was founded in 2007. With currently about 150 members from industry and science, it is one of the largest research alliances for mobility of the future. The mobility industry’s complete value chain is covered by the cooperation of high-performance automobile manufacturers as well as leading global system suppliers and numerous renowned medium-sized companies with excellent research facilities and universities at their disposal. Thus, Cluster Electric Mobility South-West provides the basis for novel innovation processes. The cluster network’s objective is to advance the industrialisation of electric mobility in Germany and to position Baden-Württemberg as an integrated research, development and production location for sustainable and innovative mobility solutions.

State Agency for New Mobility Solutions and Automotive Baden-Württemberg e-mobil BW GmbH coordinates the Cluster Electric Mobility South-West, in addition to promoting the industrialisation, market launch and application of sustainable, climate-friendly and local, emission-free mobility solutions.

Electric mobility „Made in Baden-Württemberg“

Your added value

- A network of actors along the entire value chain
- Joint research and development projects and activities
- Targeted innovation and utilisation of synergies
- Networking and exchange between players from business, science and politics
- Targeted integration of medium-sized companies in innovation processes
- Intensification of national and international contacts of both members and partners
- Access to current market and industry-related trends
- Identification of funding and financing opportunities
- Increasing the visibility of cluster members in the field of electromobility, sustainable and intelligent mobility solutions through the public relations work of the cluster management
